

Dumor!

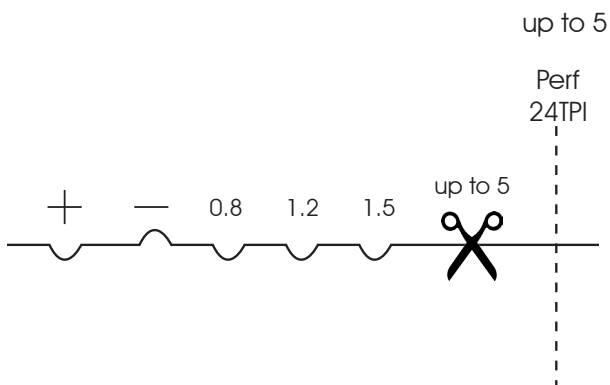

Innovation! Quality! Value!

Dumor CCP650

Dumor's unique **all-in-one ccp* machine**

***crease, cut, perf**

Why crease? Digitally printed and offset printed sheets on coated papers need to be pre creased before folding. Otherwise the print surface will crack, leaving an ugly scar across the page. The Dumor creasers allow you to gently break the paper grain, providing a hinge, while at the same time pushing the printed image into the paper, thus eliminating cracking altogether.

The world's fastest and easiest to use roller creaser, with modular air feeder expansion option and rubber rollers for digital print.

Innovation! Quality! Value!

Technical specifications

Model	Dumor CCP650
Sheet processing time	aprox. 2,5 sec per sheet
Feed speed	1 m to 18m / min
Width	to 590 mm
Weight	33kg
Power	400W

Comes with all the tools you need as standard, nothing more to buy!

Slitting and perfering tools are considered as wear parts

Handles stock From 100 to 400 gsm

Unique fast-change shaft allows you to lift the shaft out and change the tools almost instantly
Delivered as standard with:

- 2 double creasing rollers each with one positive and one negative crease eg for the cover wrap and book hinge
- Tools made of stainless steel (not cheap chromed steel that will chip and wear out). 3 widths of creasing grooves standard (other only have 1)
- 2 single creasing rollers with one positive crease for book flaps/ wings
- 1 slitting tool with no touch stainless steel counter slitter
- 1 perfering tool with nylon counter roller
- 2 high precision lockable paper guides on guide rails

Layout / alignment grid in mm

Reception tray for up to a2 paper with magnetic stops

Safety interlock cover over the rollers

Knobs to instantly adjust the roller spacing, no tools needed ever

Posidrive lower and upper roller (others only drive the lower roller)

CE certificated

Options:

- future suction feeder table
- future rubber creasing rollers for digital printed covers

Non contractual document, specifications subject to change without notice, errors and omissions excepted, copyright dumor 2008c

Features

- This unique device allows you to electrically crease, perf, and cut sheets up to 400 gsm all with the same machine
- Graduated scales on the table for sheet widths up to 615 mm
- Slitting tool add non touch technology, blade never touches the counterwheel for a super clean cut (other use a cheap nylon counter roller that lasts just days)
- These tools are supplied and are all located on 1 shaft which has screw adjustment to change for different paper thicknesses
- Slitting tool
- Perfering tool
- Single male creasing tool x 2 supplied (example for winged book covers)
- Combination male/female creasing tools x 2 supplied (example for book spine and cover opening hinge)
- Min. size A5 approx
- Easy to remove upper roller shaft in just 10 seconds for fast tool exchange
- Paper thickness knobs for setting the right roller spacing
- Large paper reception tray
- Future optional air feeder
- Optional technifold (tm of technifold ltd) rollers for the best possible creasing
- Comes with all the tools you need as standard, nothing more to buy!
